
FINAL PROJECT

UNIVERSITY SYSTEM

Team members:

Seitbekov Sanzhar

Akhmetkan Azhar

Makhmut Abulkhair

What does work?

Student

1. View courses info/files
2. Registration for courses
3. View of transcript
4. Change password
5. Rate teachers
6. View news

Manager

1. Creation and deletion of courses
2. View all courses
3. View teachers and students info
4. Change password
5. View news
6. Regulation of registration for courses

Teacher

1. Manage course files
2. Put marks for student
3. Change password
4. View self rating
5. View news

Admin

1. Manage users(create,delete,update)
2. View news
3. Change password

Librarian

1. Add books to library
2. Change password
3. View news

What does not work?

- 1)When we create a course by manager, we can add only one teacher to this course.
 - 2)Some of the methods that we have implemented in the class have not been implemented in the menu
 - 3)Due to the lack of time, implementation of Librarian is not full, it can manage only books and unfortunately we didn't have enough a couple of hours to implement log files for the admin, although we had an idea how to make them and there are traces of them in the project.
-

Conclusion

Speaking of the project, it was an unforgettable experience in creating something unusual, but so close to us. We couldn't do everything perfectly, but we did our best. The entire OOP course was incredibly interesting and fun, and most importantly useful. As one of the pillars of programming, we will need OOP knowledge in the future. Therefore, we are immensely grateful to our professor Shamoï Pakizar for her enormous contribution to the foundation of our knowledge and unique experience of traveling through the vastness of OOP.
